Subject: Local Road Use

Vitrinite is a locally owned, Junior miner that has recently started production at the Vulcan Mine. Located mid-way between Dysart and Moranbah on Saraji Road, Vulcan mine is the newest premium hard coking coal mine in the region and is a small open cut operation producing up to 2Mtpa.

During the ramp up phase of the mine and prior to constructing dedicated wash plant and rail facilities, unprocessed coal will be hauled from the mine site to existing underutilised and nearby wash plant facilities via public roads.

Road use approvals have been obtained through local council and the state authorities through notifiable road use agreements, backed by detailed traffic and pavement impacts assessments.

To undertake the haulage activities, Vitrinite have partnered with Kalari who have a local presence and a proven track record of safe and effective road haulage with world class safety monitoring and management systems.

Set to commence in late August, coal will be delivered to a combination of Moranbah North Mine, Blair Athol Mine and Capcoal Operations using AB Triples combinations and consists of up to 50 movements per day. Road users should expect minor delays.

Vitrinite and Kalari are committed to road safety and have implemented a detailed road use management plan, approved by local council, to ensure the safe operations and safety of all road users. If you have any questions regarding the planned haulage, please contact Vitrinite's Communications Officer, Rachael Dacker on (07) 3174 4816.
